Profile

Hands-on technical lead with 8+ years at Adobe building enterprise software. Lead content creation and editing engineering for Adobe GenStudio for Performance Marketing, helping marketers create on-brand ads. Partner with engineering, product, and design to deliver creative tools, shared platforms, and AI-assisted workflows.

Technical Skills

- Languages and frontend: TypeScript, JavaScript, Python, React
- Backend and platforms: Node.js, AWS Lambda, serverless and event-driven systems, REST APIs, GraphQL, Apache Airflow, ETL pipelines
- AI and ML: Claude Code, GitHub Copilot, agent skills, Model Context Protocol (MCP), PyTorch, TensorFlow, scikit-learn

Professional Experience

Adobe - Staff Software Engineer, Adobe GenStudio for Performance Marketing

February 2025 - Present

- Lead content creation and editing engineering, helping enterprise marketers generate, customize, and scale ads using on-brand content generation.
- Led technical direction for Carousel Ads and multi-channel draft creation, partnering with engineering, product, and design to define scope, align architecture, and guide implementation across teams.
- Led a redesign of GenStudio's editing experience using the Adobe-owned, multi-user canvas platform that also powers Adobe Express; brought the redesigned canvas to general availability in March 2026.
- Reduced cached-template selection-to-draft p95 latency from approximately 48 seconds to 15 seconds by architecting template preprocessing and caching across Adobe Express and GenStudio.
- Led external digital asset management (DAM) integration design and helped deliver custom validation extensions, enabling partner and customer workflows.
- Implemented GenStudio's ChatGPT Ads creation experience and partnered with the ad-publishing team to bring the channel to general availability.
- Mentored 6+ engineers on system design and career development, supported a teammate's promotion, and onboarded partner teams to the shared editing platform.
- Built reusable Claude and GitHub Copilot skills connecting agents to observability and engineering tools for cross-service troubleshooting and repeatable development workflows.
- Contributed to an autonomous issue-resolution pipeline, adding shared-codebase guidance, pull request conventions, and regression-aware workflows.
- Built server-side document-creation capabilities that became a foundation for agent-driven creative workflows and MCP integrations.

Adobe - Software Engineer IV, GenStudio Insights and Asset Intelligence

August 2022 - February 2025

- Helped lead the GenStudio Insights launch for Adobe MAX, coordinating advertising, analytics, and engineering teams across the US and Romania to connect creative attributes with campaign performance.
- Architected the data-platform redesign for GenStudio Insights and ad activation, using Apache Airflow to orchestrate a custom ETL pipeline.
- Designed creative-featurization services and guided backend implementation across Adobe's data and asset platforms; helped onboard three beta customers.
- Co-designed ingestion and ML-backed visual deduplication for an asset-discovery pilot, delivering 3x ingestion throughput and 98% precision in initial visual-matching tests; adapted components for subsequent asset-intelligence products.

- Co-led Adobe Experience Manager (AEM) and Document Cloud integration for multi-page document previews, comments, and annotations; added integration and load testing.

Adobe - Software Engineer III, AEM Cloud Asset Processing

February 2021 - August 2022

- Co-led resource-aware, per-customer throttling for a multi-tenant asset-processing service, using historical telemetry to estimate request cost and protect shared runtime capacity.
- Built processing-pipeline test infrastructure and improved transfer performance, error handling, and alerting across Node.js services and serverless workers.

Adobe - Software Engineer II, AEM as a Cloud Service

July 2019 - February 2021

- Developed tools for third-party asset-processing extensions, adding Azure and S3 storage support, credential handling, and automated React UI tests.
- Built synthetic health checks, resource metrics, and retry/error-handling improvements across SDKs and services; integrated Photoshop Actions into a cloud processing worker.

Adobe - Software Engineering Intern

May 2018 - June 2019

- Prototyped AI-service integration and built a React developer tool for a new cloud asset-processing platform.

Selected Speaking and Writing

- Adobe Summit 2025: Co-presenter, "A Developer's Guide: Extending Adobe GenStudio."
- Geekle Node.js Global Conference 2022: Testing-strategies talk and live Q&A; for 1,300+ virtual attendees.
- Technical writing: "Giving AI Access to Okta-Protected APIs"; "Using Proxyquire with Nested Dependencies."

Education

University of California, Berkeley

B.A. Applied Mathematics, concentration in Data Science, minor in Computer Science
