PROFILE

Staff Software Engineer with 8+ years at Adobe building enterprise software. Currently technical lead on engineering teams building content creation and editing for Adobe GenStudio for Performance Marketing, collaborating across Adobe with engineering, product, and design.

TECHNICAL SKILLS

Languages & frontend: TypeScript, JavaScript, Python, Lit (Web Components), MobX, React
Backend & data: Node.js, AWS Lambda, SQS, DynamoDB, Cloudflare, REST APIs, GraphQL, Apache Airflow, ETL pipelines
Observability: Datadog, Splunk, New Relic
AI: Claude Code, GitHub Copilot, MCP, LangChain, LangSmith, Mastra

PROFESSIONAL EXPERIENCE

Adobe | May 2018 - Present

Staff Software Engineer - Adobe GenStudio for Performance Marketing

February 2025 - Present

- Technical lead for initiatives spanning 20+ engineers across Europe, India, and the US. Partner with engineering managers, product, and design to deliver on-brand ad generation through a custom canvas and AI-generated copy.
- Led a team building MCP tools for draft and campaign creation from briefs, enabling users to work through ChatGPT or Claude instead of the GenStudio UI. Built the foundational server-side document-creation capabilities.
- Led architecture and cross-team delivery for Meta Carousel Ad generation and multi-channel workflows that generate LinkedIn, Meta, and TikTok ads from shared context.
- Led GenStudio's editing redesign on the Adobe-owned, multi-user canvas platform that also powers Adobe Express, reaching general availability in March 2026.
- Built a preprocessing cache service for Adobe Express templates in GenStudio, reducing p95 time to create a draft from approximately 48 seconds to 15 seconds for cached templates.
- Implemented GenStudio's ChatGPT Ads creation experience end-to-end in production in one week, partnering with the ad-publishing team to launch the channel.
- Led external digital asset management (DAM) integration design and helped deliver custom validation extensions, enabling partner and customer workflows.
- Enabled Claude-based cloud agents for my GenStudio area with codebase guidance and PR conventions, supporting regression detection and investigation to identify responsible PRs and open reverts or forward fixes.
- Built reusable Claude and GitHub Copilot skills connecting agents to observability and engineering tools for cross-service troubleshooting and repeatable workflows.
- Mentored 6+ engineers on system design and career development, supported a teammate's promotion, and onboarded partner teams to the shared editing platform.

Software Engineer IV - GenStudio Insights & Asset Intelligence

August 2022 - February 2025

- Helped lead the GenStudio Insights launch for Adobe MAX, coordinating advertising, analytics, and engineering teams across the US and Romania to connect creative attributes with campaign performance.
- Architected the data-platform redesign for GenStudio Insights and ad activation, using Apache Airflow to orchestrate a custom ETL pipeline.
- Designed creative-featurization services and guided backend implementation across Adobe's data and asset platforms; helped onboard three beta customers.
- Co-designed ingestion and ML-backed visual deduplication for an asset-discovery pilot, delivering 3x ingestion throughput and 98% precision in initial visual-matching tests; adapted components for subsequent asset-intelligence products.

Software Engineer III - AEM Cloud Asset Processing

February 2021 - August 2022

- Co-led resource-aware, per-customer throttling for a multi-tenant asset-processing service, using historical telemetry to estimate request cost and protect shared runtime capacity.
- Built processing-pipeline test infrastructure and improved transfer performance, error handling, and alerting across Node.js services and serverless workers.

Software Engineer II - AEM as a Cloud Service

July 2019 - February 2021

- Developed tools for third-party asset-processing extensions, adding Azure and S3 storage support, credential handling, and automated React UI tests.
- Built synthetic health checks, resource metrics, and retry/error-handling improvements across SDKs and services; integrated Photoshop Actions into a cloud processing worker.

Software Engineering Intern

May 2018 - June 2019

- Prototyped AI-service integration and built a React developer tool for a new cloud asset-processing platform.

SELECTED SPEAKING & WRITING

Adobe Summit 2025: Co-presenter, "A Developer's Guide: Extending Adobe GenStudio."
Geekle Node.js Global Conference 2022: Testing-strategies talk and live Q&A for **1,300+ virtual attendees**.
Technical writing: "Giving AI Access to Okta-Protected APIs"; "Using Proxyquire with Nested Dependencies."

EDUCATION

University of California, Berkeley

B.A. Applied Mathematics, concentration in Data Science, minor in Computer Science
