Dear Hiring Team,

I am excited to apply for Staff Software Engineer and engineering leadership roles focused on AI-first products, enterprise software, and creative technology. I bring 8+ years of experience at Adobe, where I lead teams of engineers building Adobe GenStudio for Performance Marketing and help translate emerging AI opportunities into shipped enterprise product experiences.

In my current work, I focus on GenStudio Create Canvas and the creative workflows marketers use to generate, customize, approve, and scale content. I recently built the GenStudio for Performance Marketing integration for brand-governed ChatGPT ads, helping enterprise teams assemble approved ad creative for a new conversational AI performance channel. That work sits at the intersection I enjoy most: applied AI, enterprise-grade product quality, cross-functional execution, and systems that make creative teams faster without sacrificing governance.

My background spans full-stack product engineering, technical leadership, extensibility, cloud services, and developer platforms. Before GenStudio Create Canvas, I built microservices for AEM as a Cloud Service and helped implement GenStudio Insights integrations with Meta, LinkedIn, and Customer Journey Analytics. I have also shared this work externally through Adobe Summit, API World, Adobe Developers Live, and technical writing about AI-assisted development workflows.

Outside of my core product work, I explore how AI can improve developer workflows in practical, production-minded ways. I created reusable Claude Code skills, wrote about giving AI assistants access to Okta-protected APIs, and built personal projects that turn real workflows into repeatable AI-assisted systems. These side projects sharpen the same judgment I bring to enterprise product work: start with a real user problem, respect production constraints, and build tools that people can actually use.

I would be excited to bring my experience leading engineering teams, building AI-first enterprise products, and shipping creative technology at Adobe to your team. Thank you for your consideration.

Sincerely,

Jamie Delbick
